

Git + GitHub setup for Python Practice 2026

Run these commands in the VS Code PowerShell terminal/

```
In [ ]: # 1. Go to your project folder
cd "E:\Python\Python practice 2026"
```

```
In [ ]: # 2. Check Git
git --version
```

```
In [ ]: # 3. Configure Git identity
git config --global user.name "Allah Ditta Babar"
git config --global user.email "YOUR_GITHUB_EMAIL"
```

```
In [ ]: # Check configuration
git config --global --list
```

```
In [ ]: # 4. Initialize Git
git init
git branch -M main
```

```
In [ ]: # 5. Connect Local project to GitHub
git remote add origin https://github.com/babarkhan786/Python-practice-2026.git
```

If you get: "remote origin already exists", use:

git remote set-url origin
<https://github.com/babarkhan786/Python-practice-2026.git>

```
In [ ]: # Check remote connection
git remote -v
```

```
In [ ]: # 6. Create .gitignore
@"
.vscode/
__pycache__/
*.pyc
.ipynb_checkpoints/
.venv/
venv/
~$*.xlsx
"@ | Out-File -Encoding utf8 .gitignore
```

```
In [ ]: # Check .gitignore
```

```
Get-Content .gitignore
```

```
In [ ]: # 8. Check project status
        git status

        # 9. Add all project files
        git add .
```

```
In [ ]: # Check staged files
        git status

        # 10. Create the first commit
        git commit -m "Initial Python practice project"

        # 11. Push the project to GitHub
        git push -u origin main
```

```
In [ ]: # -----
        # FUTURE UPDATES
        # -----
        # After modifying or adding notebooks, Python files, datasets, etc.:

        git add .
        git commit -m "Updated Python practice"
        git push

        # Examples of commit messages:
        # git commit -m "Added pandas practice"
        # git commit -m "Added NumPy practice"
        # git commit -m "Added Seaborn visualization"
        # git commit -m "Added Titanic analysis"
        # git commit -m "Added Iris analysis"
```
